

## RESEARCH ASSENT FORM

**Protocol Title:** Feverprints: Body Temperature in Health and Disease

**Principal Investigator:** Fatma Dedeoglu, M.D.

We want to tell you about a research study we are doing. A research study is a way to learn more about a scientific problem. For our study, we want to find out more about normal temperatures in children, and to try to predict why children get fevers. Any child or adult with an iPhone and a thermometer can join the study.

If you agree to join this study, you will be asked to measure your temperature various times during the day. You can do this with a regular thermometer, or you can wear a wireless thermometer that does this automatically. You and your parent will also be asked to complete surveys about your health, and indicating when you get sick, and when you get well.

This study may cause some inconvenience in asking you or your parent to measure your temperature and enter your health information into the iPhone. There should not be any additional risks to participating in this study.

Although this study may not benefit you directly, we hope that this study will allow us to learn more about fevers, and in the future it may help doctors to make quicker and more accurate diagnoses.

You do not have to join this study. It is up to you. You can say okay now and change your mind later. All you have to do is tell us you want to stop. No one will be mad at you if you don't want to be in the study or if you join the study and change your mind later and stop.

If you have any questions about this study please feel free to contact Dr. Jonathan Hausmann at [Feverprints@childrens.harvard.edu](mailto:Feverprints@childrens.harvard.edu).

If you sign your name below, it means that you agree to take part in this research study.
